PROFESSIONAL SUMMARY

B.Sc. IT graduate (University of Mumbai, 2026) with a 9.12 CGPA, currently pursuing M.Sc. in Artificial Intelligence. Hands-on experience building cross-platform mobile and web applications using React Native, React.js, Django, and Python. Also built an IoT-based coal transportation monitoring system using ESP32, Load Cell (HX711), and GPS with Firebase cloud integration. Proven ability to architect end-to-end solutions from database design to production-ready UI and a track record of shipping features that solve real-world problems. Seeking a full-stack, frontend, or backend developer role to deliver measurable technical impact.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+)

Frontend: React.js, React Native, HTML5, CSS3, Responsive Design

Backend: Django, Django REST Framework, RESTful APIs

Databases: MySQL, SQLite, Firebase.

IoT & Embedded: ESP32, Load Cell (HX711), NEO-6M GPS, Sensor Calibration, Firebase Realtime Database

Tools & VCS: Git, GitHub, VS Code, Postman, Expo CLI

Core Skills: Problem Solving, Debugging

FEATURED PROJECT

Leftover Food Donation Platform

React Native · Django · SQLite

- Architected and deployed a full-stack mobile application connecting food donors with NGOs, enabling real-time coordination across the entire donation lifecycle — posting, request handling, and fulfillment.
- Engineered a RESTful Django backend with SQLite data layer, designing normalized schemas and API endpoints that reduced redundant data calls and improved query efficiency.
- Built multi-role user management system supporting separate donor and NGO flows with distinct dashboards, authentication, and access controls in React Native.
- Delivered end-to-end feature ownership: requirements gathering → UI/UX design → backend integration → testing — independently within an academic timeline.

AppointMate - Personal Appointment Manager

React · Vite · Firebase · Firestore

- Designed and deployed a full-stack appointment management web application enabling users to manage clients, appointments, calendars, reminders, and personalized settings from a unified dashboard.
- Implemented Firebase Authentication and Firestore with user-scoped data storage and security rules, ensuring each user's clients and appointments remain isolated and protected.
- Built end-to-end appointment and client management workflows, including CRUD operations, appointment conflict detection, duration calculation, rescheduling, reminders, calendar integration, and client-to-appointment synchronization.
- Developed a responsive React interface optimized for desktop and mobile devices, with reusable components, customizable client terminology, dashboard analytics, and persistent user preferences.
- Deployed the production application on Firebase Hosting, configuring SPA routing, production builds, and validating authentication, data persistence, and core workflows in the live environment.

StudyMate AI - Your Personal AI Study Companion

Next.js · Supabase · Gemini AI · PostgreSQL

- Designed and deployed a full-stack AI-powered study platform that enables students to upload study materials, interact with an AI Tutor, generate quizzes and flashcards, and track learning progress.
- Engineered a RAG-based AI learning system using document chunking, Gemini embeddings, and PostgreSQL/pgvector to generate context-grounded answers from uploaded study materials with relevant page references.

- ▶ Built secure authentication and multi-user data isolation with Supabase Auth and Row Level Security (RLS), ensuring users can access only their own study materials, quizzes, flashcards, and learning data.
- ▶ Developed AI-powered learning workflows including PDF processing, AI Tutor conversations, customizable quiz generation with multiple question types, flashcard generation, summaries, topic extraction, and personalized recommendations.
- ▶ Deployed and validated the production application on Vercel, integrating Supabase and Google Gemini services while testing authentication, PDF processing, AI generation, data persistence, and responsive desktop/mobile workflows.

Coal Transportation Monitoring and Weight Tracking System

ESP32 · Load Cell · HX711 · NEO-6M GPS · Wi-Fi · Firebase · Web Dashboard

- ▶ Developed an IoT-based monitoring system for tracking coal transportation, vehicle weight, and geographical location using an ESP32 microcontroller.
- ▶ Integrated a Load Cell and HX711 amplifier to acquire weight measurements and implemented calibration and filtering for stable weight monitoring.
- ▶ Integrated the NEO-6M GPS module with the ESP32 to collect real-time latitude, longitude, altitude, satellite count, and GPS validity information.
- ▶ Established Wi-Fi communication between the ESP32 and cloud database, enabling sensor and GPS data to be transmitted and stored remotely in Firebase Realtime Database.
- ▶ Developed a web-based monitoring dashboard to display collected weight and location information and provide a centralized view of the transportation data.

EDUCATION

M.Sc. Artificial Intelligence (Currently Pursuing)

KES' B. K. Shroff College, University of Mumbai

B.Sc. Information Technology Graduated May 2026

Nirmala Memorial Foundation College, University of Mumbai

Cumulative CGPA: 9.12 /10 (Sem 1: 8.70→Sem 2: 9.40→Sem 3: 9.50→Sem 4: 9.50→Sem 5: 8.70→Sem 6: 8.90)

HSC 2023

Matruchhaya College | 56.50%

SSC 2021

Shree Vishwakarma High School | 68.40%
